

New Release

20ml Metal Automatic Drencher

PAD1232

N J Phillips Ltd, in the spirit of continuous improvement, have released a new model 20ml Metal Auto Drencher. This replaces the current PAD801.

So what is different?

Well, on the outside it is, obviously, coloured **Black**, to easily identify the latest model!
But there are changes on the inside too...

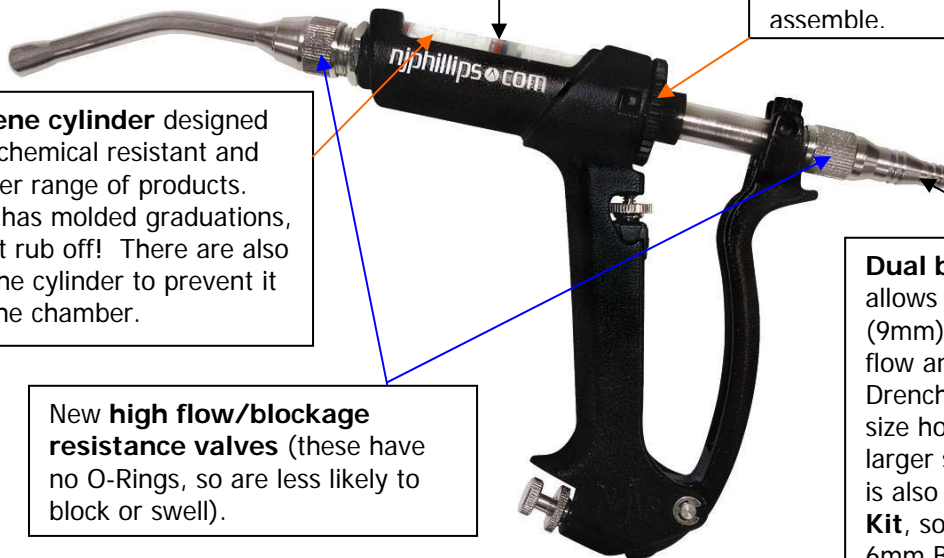

New **O-Ring Piston Assembly** with lubricating felt washer. As new drenches are continually being developed, and becoming harsher, this new Piston Assembly has been created to handle a wider range of products with increased reliability.

Quick release body plug/pushrod guide allowing for quick access to the piston assembly for maintenance and cleaning. Twist anti-clockwise to pull out. Push in and line-up the tabs to assemble.

Polypropylene cylinder designed to be highly chemical resistant and handle a wider range of products. The cylinder has molded graduations, so they won't rub off! There are also notches on the cylinder to prevent it spinning in the chamber.

New **high flow/blockage resistance valves** (these have no O-Rings, so are less likely to block or swell).

Dual barb inlet fitting that allows 1/4" (6mm) and 3/8" (9mm) hose to allow for faster flow and thicker drenches. The Drencher is supplied with a 3/8 size hose. Because this is a larger size hose, the instrument is also supplied with an **Adaptor Kit**, so can be attached to a 6mm Backpack spigot.

The new PAD1232 Drenchers will be phased in when current stocks of PAD801s run out (i.e. in about a week). **Trade price is the same - \$95 GST Exc.**

Service Kits

Minor Service Kit – WX1617 \$15.90 GST Exc
Major Service Kit – WX1618 \$23.50 GST Exc
Cylinder – SH1193A \$11.70 GST Exc

**PAD801
Mk3 –
phasing out**

The WX1617 and WX1618 Service Kits will also fit the previous blue model with NJP embossed at the base of the handle.

The Minor Service Kit WX1617 will also fit 20ml Drenchers from October 1996 onwards. Therefore, the WX1343 Service Kit will be phased out. A New ID Chart is attached to show which Kits are required for which models. The Major Kits are different, as the instruments have different sized cylinders.

Look out for further detailed information in our next "Best Shot" Newsletter, due out in February.
